

HOW TO BROWSE SAFELY

#CybersecurityAwarenessMonth

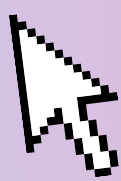

Do not enter any information on a non-HTTPS website (e.g HTTP, without the s). Without HTTPS, any data passed is unencrypted.

Clear your cookies, session data, and cache regularly. Don't leave your data lying around!

BEWARE OF SHORT URLS

Shortened URLs are one of the main methods that attackers use to hide and modify malicious URLs.

DO NOT CLICK ANY UNKNOWN URLS

If you're unsure, copy-paste the URL in the browser or type it in. It minimizes the risk of becoming a victim of cyber tricks.
